

# Host funded summer interns!

## Assembler Intern

**Alternate titles:** Manufacturing Intern, Production Technician Intern

### **Position overview:**

This internship should provide a valuable learning opportunity for individuals interested in the field of manufacturing and assembly, offering exposure to real-world processes and the chance to work alongside experienced professionals.

### **Skills the intern will have:**

- **Basic Electrical Theory:** A fundamental understanding of electrical theory, including knowledge of circuits, voltage, current, resistance, and basic electrical components. The ability to apply this knowledge to practical tasks is essential.
- **Proficiency in Using Common Engineering Tools and Equipment:** Competency in using and maintaining common engineering tools and equipment, such as oscilloscopes, multimeters, power supplies, and other relevant instruments.
- **Mechanical Assembly:** Hands-on experience with mechanical assembly, including the ability to assemble, disassemble, and modify mechanical systems and components as needed for projects.

### **Expectations:**

Interns will work with host companies to determine if work will be done virtually or in-person. Internships will be a maximum of 240-hours total beginning in mid-May at the earliest and ending in September at the latest.
