

Host funded summer interns!

Software Development Intern

Alternate titles: Software Engineering Intern, Programming Intern

Position overview:

Interns will work closely with experienced software engineers and contribute to real-world projects. This internship will provide the student with valuable insights into the software development process and enhance their technical skills.

Skills the intern will have:

- **Debugging:** Ability to identify and troubleshoot software issues, understand error messages, and employ debugging techniques to resolve problems efficiently.
- **Version Control:** Proficiency in version control systems such as Git, including knowledge of branching, merging, and code collaboration using platforms like GitHub or Bitbucket.
- **Scalability:** Familiarity with the concept of software scalability and the ability to optimize code and systems for performance and growth.
- **Scripting:** Knowledge of scripting languages (e.g., Python, Bash) for automating tasks, creating utilities, and enhancing development workflows.
- **Operating systems:** Familiarity with a variety of operating systems including Windows, Linux, Unix, and MacOS

Expectations:

Interns will work with host companies to determine if work will be done virtually or in-person. Internships will be a maximum of 240-hours total beginning in mid-May at the earliest and ending in September at the latest.
